Originally erected as WPA project in the 1930's, Bo Rein Memorial Stadium (formerly Riverside Stadium) has housed many memorable plays, games and seasons for our Dragons. It has been home for thousands of student athletes and fans alike—a place to come together as a community and share in a passion—Niles Athletics.

In the late 1960s, nearly 40 years after its erection, it became apparent that the original stadium was not meeting the needs of our community. We came together and privately raised the funds to turn Riverside Stadium into one of Ohio's finest athletic facilities.

Now, 40 years beyond expansion, the time to return the stadium to "Ohio's Best" is now upon us. Understandably, time, exposure to the elements, and advances in technology all make this the right time for ***Renovating Excellence In Niles.***

The multi-year, multi-phase project is ambitious in both time and scope. Phase one—New lights, PA system and emergency structural repairs to the home and visitor stands—are complete. Now it is time for the second phase to begin, it calls for the installation of a synthetic playing field with all-season use capability. The benefits of synthetic turf over natural grass are many. Most importantly:

All weather capability increases overall use opportunities: football, soccer, band, baseball, softball, physical education classes.

Safer, more uniform surface for team practices and games.

Significant reduction in field maintenance time and costs.

And that is just the beginning! Other phases of the project will truly set Bo Rein Memorial Stadium and our community apart from most. (See total project scope on sleeve).

Just like during the original stadium expansion project, this endeavor cannot be completed without your help. Please fill out the form (right) and take part in...
